

The LABEL WIZARD- Adjustable Patent Pending

Thank you for purchasing The LABEL WIZARD- Adjustable Model. The LABEL WIZARD is a high quality Amish crafted piece of equipment that ensures quick and consistent label placement on a variety of round bottles and jars between 1" to 3 1/4" in diameter (2.5cm - 8.3cm). The LABEL WIZARD is primarily intended for use with square or rectangular "peel & stick" labels.

INSTRUCTIONS

A) DETERMINING CORRECT SHELF POSITION

Depending on the diameter of your container, there are 4 labeling positions that can be used with the Label Wizard - Adjustable. (Below settings are recommendations only, and we suggest that you try different positions to determine your preference):

1. Top Slot & Top Pin (fig.8) - Use this setting for labeling containers 1" to 1 1/4" in diameter (2.5cm - 3.2cm).
2. Bottom Slot & Bottom Pin - Use this setting for labeling containers 1 1/2" to 2" in diameter (3.8cm - 5.1cm).
3. For containers 2 1/4" to 2 1/2" in diameter (5.7cm - 6.4cm) - Set shelf directly on cradle (fig.4), don't use either slot/pin..
4. For containers 2 3/4" to 3 1/4" in diameter (7cm - 8.3cm) - Remove shelf & place container directly on cradle (fig.4).

B) SETTING LABEL POSITION

Determine the desired distance from the bottom of the bottle or jar ("container") to the bottom of the label. Loosen the *Adjustment Knob* (fig.1), slide the *Carriage* (fig.2) and align the red line to the desired measurement on the *Cradle Ruler* (fig.3). Tighten the *Adjustment Knob*.

C) BOTTLE PLACEMENT

Place the "container" on the correct shelf position, or directly on *Bottle Cradle* (fig.4), *making sure that the "container" bottom is in contact with the End Plate* (fig.5). and laying flat against the back plate of the *Bottle Cradle* (fig. 4).

TAPERED BOTTLES NOTE: To ensure correct label placement when using tapered bottles, the bottom of the bottle must lay flat against the *End Plate* (fig. 5), rather than resting flat against the back plate of the *Bottle Cradle* (fig. 4).

D) APPLY LABEL

Peel off a label from it's backing. Next, squarely align the bottom of the label with the left edge of the *Label Platform* (fig.6) (near the red line) and press the label onto the *Label Platform* (near the red line). Then press the other end of the label (which should now be extended over the "container") against the "container". Finally, lift and rotate the "container" while pressing the label firmly in place against the rest of the "container".
